About Me

👋 Hello, I am a web developer, I like to make web pages in addition to applying good practices for the development of these, I also like to learn new technologies and find different ways to solve some kind of problem.

My Projects Personal

- **Veterinary-LoyalFriend**

Veterinary LF is a project done in react, which consists of making appointments, add testimonials and has a contact form. In addition it also has an administrator interface to see the above mentioned. To perform the mentioned actions an account must be created which must be confirmed in the mail. JWT was used for user authentication and deployed in netlify.

Stack: JavaScript, React, Sass, Redux, MongoDB, NodeJS, Express

- **Finding Pets**

Finding Pets is a small social network project made in nextJS, with the purpose of finding lost pets through publications, besides being able to comment on publications and customize your profile. Jotai was used for status management, and JWT was used for user authentication. Finally it was deployed in vercel.

Stack: JavaScript, TypeScript, NextJS, CSS, MongoDB, Jotai

- **Nova Shop**

Nova Shop is a small project for the simulation of an ecommerce. For this project we used JWT for user authentication and nodemailer for sending email for account confirmation, finally all data is stored in a mongoDB. This project was deployed in netlify.

Stack: JavaScript, HTML5, CSS, MongoDB, NodeJS, Express

- **Account Manager**

Account manager is a project in which the user will be able to manage/store his accounts. On the other hand it has a user authentication with JWT, in addition to check the mail by an email sent. This project was worked with python (FastAPI) on the backend and React was used as frontend.

Stack: JavaScript, TypeScript, React, Jotai, Python, FastAPI, Tailwind, MySQL

My Best Practices

- Clean Code
- Principles Solid

Technologies and Tools

JavaScript / TypeScript / NodeJS / React / CSS / NextJS / HTML / MongoDB / MySQL
